STAT 021 S22 Final Project Peer Evaluation

Abraham Porschet

TOTAL POINTS

(not graded)

QUESTION 1

1 Evaluation A **5 / 5**

QUESTION 2

2 Evaluation B

Your name: Abe Porschet

Group scores:

	Self	**Anika**	**Koji**	**Person 3**
Contributions & Attitude	4	4	4	
Cooperation with Others	4		4	
Focus, Commitments	4	4	4	
Team Role Fulfillment	4	4	4	
Ability to Communicate	4	4	4	
Accuracy	3	4	4	
Total points				

Notes and Comments for myself:

I think I put forth a good amount of effort helping with the writeup and the poster as well as overall research. I gave myself less than a 4 on accuracy though because I made about 2 mistakes on the poster using the incorrect terminology. I knew the correct information and wrote the wrong thing but didn't realize it until it was too late. Otherwise I think I did a pretty solid job.

Since I gave Koji and Anika the same score I'll grade them together:

Koji and Anika made this project the most enjoyable group project I've ever participated in. In high school group projects were always a point of frustration and I never felt quite

comfortable, with no small amount of fault falling on my shoulders for that. Koji and Anika were both incredibly helpful in finding and analyzing data sets when we were looking for the data that best served our purposes. The three of us all have incredibly busy schedules as well as dealing with my chronic illness as well as Anika and Koji's covid throughout the project made finding time to work fairly difficult at times but they were extremely flexible and good at finding time to work. They were both able to participate in the different sections of the project and feel comfortable giving suggestions and taking advice the whole way through. Not only were they congenial while working but also were incredibly fun to work with and left me excited to see the "hoodie gang" every time we were in class and working together outside of class. They all communicated their clear visions for the project and were able to handle my ideas as well. All in all, I had a ton of fun and I learned a lot about statistics and replicability and made two really good friends while I did it.
